resistant plants produced are particularly maize, soybean, cotton, sugarbeet and canola, but also other field crops, fruits and vegetables, turf and forage grasses and nut-producing plants. The plants are optionally resistant to insects, fungi, viruses, bacteria, nematodes, stress, desiccation and/or other herbicides. They can be used in the production of a herbicides for the high throughput in vitro screening of potential herbicides. The present sequence represents a PCR primer used in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel polynuclectide encoding the rice 5-enolpyruvylshikimate phosphate synthase, used to produce glyphosate tolerant or resistant plants -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to a glyphosate resistant rice 5-enolpyruvylshikimate phosphate synthase (EPSPS) gene. This gene can be used to produce plant tissue and/or morphologically normal fertile whole plants which are tolerant or resistant to glyphosate herbicide, and in the production of a herbicidal target for the high throughput in vitro screening of potential herbicides.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to an Oryza sp. 5-enolpyruvylshikimate phosphate synthase (EPSPS) gene. Vectors containing the gene may be used to produce plant tissues and fertile whole plants which are substantially tolerant or substantially resistant to glyphosate herbicide and to produce a herbicidal target which is used for high throughput in vitro screening of potential herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Isolated polynucleotide encoding a 5-enolpyruvylshikimate phosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              synthase from rice is used for producing transgenic plants with enhanced resistance to glyphosate herbicide -

The present invention relates to a hairpin or hammerhead ribozyme, designed to cleave RNA encoding a cyclin or cell-cycle dependent kinases other than cell-cycle dependent kinases CDK1. PCNA and Cyclin B1. Representative examples of ribozyme recognition sites are given in AAA82415 to AAA86787. The ribozyme of the invention is useful for inhibiting restences by introduction of the ribozyme is resistant to endonuclease activity and hence is efficient in restenosis treatment.
                                                                                                                                                                                                                                                                                                                                                                                  New hairpin and hammerhead ribozyme for inhibiting restenosis, cleaves RNA encoding a cyclin or cell-cycle dependent kinase other than CDK1, PCNA and Cyclin B1

                       The present invention describes a number of phosphorothioate antisense sequences to the human focal adhesion kinase (FAK) protein. This protein is involved in integrin-mediated signal transduction, and is implicated in cancer, particularly colon, breast and oral tumours, embryonic development disorders, angiogenic disorders and wound healing. The antisense sequences, including the one shown here, can be used in the treatment of all of these.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a number of phosphorothioate antisense sequences to the human focal adhesion kinase (FAK) protein. This protein is involved in integrin-mediated signal transduction, and is implicated in cancer, particularly colon, breast and oral tumours, embryonic development disorders, angiogenic disorders and wound healing. The antisense sequences, including the one shown here, can be used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antisense compounds for inhibiting focal adhesion kinase expression, especially useful for inhibiting retinal neovascularization, or for diagnosing and treating e.g. colon cancer -

Sense and antisense PCR primers (AAT18222-23) were used to amplify DNA (see AAT17958) coding for human heparin-binding epidermal-like growth factor (HBEGF) (AAR92897) using p232B1 as template. The PCR product has a 5' NCOI site and a 3' stop codon followed by an SalI site. It was ligated into PETSAP-MCS (see AAT18220-21). The resulting plasmid (p236B1) (see AAT18232) codes for a fusion (AAR92921) of HBEGF and saporin linked by an Ala-Met-Ala linker. This was expressed in Escherichia coli and is useful for targeting cytotoxic saporin e.g. to solid tumour cells bearing the HBEGF
                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The present invention describes a novel enzymatic nucleic acid (ENA)

having a hammerhead motif (EM) comprising: (i) at least 5 ribose

residues; (ii) a 2'-C-allyl modification at position 4 of the ENA; (iii)

at least ten 2'-O-methyl modifications; and (iv) a 3'-end modification.

The ENA's can inhibit collagenase and stromelysin production in the particularly osteoarthritis or the treatment or prevention of arthritis, particularly osteoarthritis or rheumacoid arthritis. The ENA's can also be used to treat antigen presenting cells of adonor to induce tolerance in a recipient to an alloantigen of a donor. They can also be used for enhancing graft tolerance or for treating autoimmune disease, and for creating allergies and other inflammatory conditions. The ENA's can also be used in diagnosis. Ribozyme therapy impacts on the expression of stromelysin without introducing the non-specific effects upon gene expression which accompany treatment with retinoids and dexamethasone.

The concentration of ribozyme required to affect a therapeutic treatment is lower than that required of antisense molecules, and is highly expectific. The present sequence is used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antisense oligonucleotide; phosphorothioate; TNFalpha; cytokine; inhibit; tumour necrosis factor alpha; inflammatory bowel disease; diabetes; rheumatoid arthritis; infectious disease; multiple sclerosis; hepatitis;

The present sequence is a PCR primer for human clone AAP12616HY coding sequence (see AAC90427). The AAP12616HY coding sequence is useful for modulating the immune and inflammatory responses, and hematopoiesis; and in gene therapy for treating allergies (e.g. asthma), autoimmune disorders (e.g. arthritis or transplantation rejection), in tissue treatment of surgical incisions and ulcers, such as stomach or diabetic ulcers). The AAP12616HY coding sequence is thought to encode a chemokine
                                                                                                                                                                                                                                                                                                    New chemokine polypeptide from fetal liver-spleen, useful in gene therapy, especially for modulating hematopoiesis, or immune or inflammatory responses, e.g. for repairing tissues or treating autokimmune disorders
                                                                                                                                                                                                                                                                                                                                                                                        Example 3; Page 78; 92pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents an antisense oligonucleotide sequence which targets a region of the human tumour necrosis factor alpha (TNFalpha) nucleotide sequence. TNFalpha is an important cytokine that plays a role in host defence. It is produced mainly in macrophages and monocytes in response to infection, invasion, injury or inflammation. Overexpression of TNFalpha can result in disease states, particularly in infectious, inflammatory and autoinmune diseases. The invention relates to antisense oligonucleotides, such as that represented by the present sequence which are capable of modulating the TNFalpha gene expression. The oligonucleotides optionally have a phosphorothoate backbone, and may also optionally contain at least one 2'-0-methoxyethyl modification. The oligonucleotides are useful for modulating the expression of human coligonucleotides are useful for modulating the archeology response, reducing the blood glucose level in a human and treating a human having a disease or condition associated with TNFalpha in Casamples of diseases associated with TNFalpha include diabetes, inflammatory bowel diseases multiple sclerosis, pancreatitis, rheumatoid arthritis, infectious disease, multiple sclerosis, pancreatitis or allogaraft rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

The assay is versatile in that any number of test sequences can be tested by placing the test sequence adjacent to a defined protein-binding screening sequence. Binding of mols. to these test sequences changes the binding characteristics
                                                                                                                                       The present sequence is a primer for the cDNA encoding human chemokine alpha-3 (CK alpha-3). CK alpha-3 can be used to treat tumours. chronic infections, leukaemia, T-cell mediated autoimmune diseases, parasitic infections, psoriasis, asthma and allergy. It can also be used to regulate hematopoiesis, stimulate growth factor activity, inhibit angiogenesis and promote wound healing.
                                                                        treat

of the protein mol. to its cognate binding sequence. When such a mol. binds the test sequence, the equilibrium of the DNA:protein complexes is disturbed, generating changes in the concentration of free DNA probe. One application of this method is to eucaryotic general transcription factors (e.g. TFIID), where the target region is typically selected from DNA sequences adjacent to the binding site for the eucaryotic transcription factor. Numerous exemplary test sequences are given: the sequences in AAQ69251-731 and AAQ698800 correspond to promoter targets (typically, TATA box-contg. sites) for human genes and the sequences in AAQ69732-849 correspond to promoter targets for viral genes. The test sequences may also be randomly generated. DNA:protein interaction may be used for screening purposes, e.g. the Herpes Simplex Virus (HSV) origin of replication and UL9 (see AAQ69851-52, AAQ69855 and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Duplex DNA; target region; binding characteristic; DNA binding protein; TFIID; transcription factor; binding site; inhibition; enhance; inherited genetic disorder; cancer; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequences given in AAT63713-4312 represent duplex DNA's which act as target regions in the method of the invention. The method for altering the binding characteristics of a DNA-binding protein to duplex DNA comprises contacting the duplex DNA with a small molecule which binds sequence-specifically to a target region, where, when the small molecule is bound to the target region, it is adjacent to, but not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Altering binding characteristics of DNA binding proteins to duplex DNA - by attaching specific small cpd. to target region close to the protein's binding site, useful in treatment of viral disease, cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequences AAX17001 to AAX17600 represent specifically claimed target test sequences that are used in the method of the invention of determining the DNA sequence preference of a DNA-binding molecule. The method comprises: (1) adding a test molecule and a DNA-binding protein to a mixture of duplex DNA test oligonucleotides, each of the test oligonucleotides having a test sequence adjacent to a screening sequence,
overlapping by more than 4 bp, a binding site for a DNA-binding protein. The small molecule is added at a concentration effective to alter the binding of the DNA binding protein, pref. TFIID, to its binding site on the duplex DNA. The binding of the small molecule may inhibit or compounds isolated using this method are potentially useful as therapeutic agents for treatment of any disease which involves a specific DNA sequence, e.g. cancer, or inherited genetic disorders etc. The method is suitable for screening large biological or chemical ibraries and allows determination of sequence-specific and relative affinities of known DNA-binding agents for different DNA sequences. The design of these duplex DNA's allows a single DNA; protein interaction to be used for screening sequence specific, or preferential, DNA binding proteins that recognise almost any possible sequence (see also AAT49539-
                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                a DNA-binding molecule

where the screening sequence binds to the DNA-binding protein with a binding affinity that is independent of the DNA sequence of the test sequence, and where the mixture of duplex DNA test oligonocleotidess concludes several test sequences; (ii) incubating the test molecule, the mixture of duplex DNA test oligonocleotides and the DNA-binding protein for a time sufficient to permit binding of the test molecule to test sequences in the duplex DNA; (iii) separating unbound test oligonocleotides from test oligonocleotides bound to binding protein; (iv) maplifying the unbound test oligonocleotides; (v) repeating steps (ii) to (iv); (vi) isolating the amplified test oligonocleotides; and (vii) sequencing the isolated test oligonocleotides. Test sequences ANAI7001-X17481 and AAX17600 correspond to promoter targets for human genes and test sequences AAX17482-X17599 correspond to promoter targets

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; hyperpolarisation-activated channel; HAC3; neuroleptic; nootropic; cerebroprotective; antimigraine; antiarrhythmic; gene therapy; pacemaker dysfunction; familial sinus rhythm disease; sick sinus syndrome associated with atrial fibrillation; sinus tachycardia; bradycardia; ventricular arrhythmia; bipolar disease; schizophrenia; central nervous system disorder; migraine; seizure;
present invention provides a method of diagnosing a vascular disease
                   in an individual, involving determining the sequence at various polymorphic sites within the human thrombospondin 1 and thrombospondin 4 genes. The sequences at a number of polymorphic sites are also provided in the specification. In particular, the method can be used in the diagnosis of atherosclerosis, myocardial infarction, coronary heart disease, stroke, peripheral vascular diseases, venous thromboembolism and pulmonary embolism. Single nucleotide polymorphisms (SNRs) are also useful in forensics, paternity testing, genetic analysis and phenotype correlations to diseases. The present sequence is an example of one of the human gene SNPS shown in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel human hyperpolarization activated channel 3 polypeptide useful to identify hyperpolarization-activated cation channels modulators for treating familial sinus rhythm diseases, and ventricular arrhythmias -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to the coding sequence and polypeptide sequence for human hyperpolarisation activated channel 3 (HAC3) (see AAC66779 and AAB28175). HAC3 comprises an alpha-subunit of a cation channel, which forms upon hyperpolarisation, a cation channel with an additional HAC. Modulators of HAC activity are useful for treating various pacemaker dysfunctions such as familial sinus rhythm diseases, sick sinus syndrome associated with atrial fibrillation, sinus tachycardias and bradycardias as well as ventricular arrhythmias. The modulators are also useful for treating other disorders involving
                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                 ö

abnormal ion flux, e.g., memory and learning disorders, sleeping disorders, bipolar disease, schizophrenia, central nervous system (CNS) disorders such as migraines, hearing and vision problems, seizures, and as neuroprotective agents (e.g. to prevent stroke). The Human HAC3 coding sequence is useful for treating the disorders by gene thorapy. The present sequence is a PCR primer which can be used to isolate the human HAC3 coding sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                An electrophoretic mobility shift assay (EMSA) was used to investigate DNA/protein interactions in the CD11b promoter. Nuclear extracts from U937 (myeloid) or HeLa (non-myeloid) cells were incubated with a 130 bp probe which extends from bp -90 to +40 of the CD11b promoter. In addition to the 130 bp probe, 30 bp double stranded oligonucleotides were used as probes (AAT14576-79). The sequence between bp -64 and -59 constitutes a consensus binding site for the transcription factor Sp1, so to investigate whether complexes formed in the EMSA represent Sp1 binding, a 97 bp DNA fragment of the tissue plasminogen promoter contg. 2 characterised Sp1 binding sites was used as a competitor. The complexes, but not the PU.1 complex, were competed by the addition of DNA contg. Sp1 binding sites, indicating that they represent Sp1 binding the CD11b promoter.

This sequence, and the sequence represented by AAT04233 are amplification primers for pNIV3606 (which contains human histamine H1 receptor CDNA up to the fourth transmembrane region). The sequences shown in AAT04237, and AAR79965 represent human histamine H1 receptor CDNA and encoded receptor protein, and were constructed using AAT04234-6. Histamine H1 receptor is part of a family of histamine receptor proteins. Of these sequences the greatest homology was found with bovine histamine H1 receptor (overall identity of 82%, with the transmembrane regions alone having an identity of 86%). These receptors are coupled to different second messenger pathways via quanine nucleotide regulatory proteins (G proteins). This receptor transduces the signal through calculation ion mobilisation via an increase in intracellular inositol 1.4.5-triphosphate levels. Plasmids containing human histamine H1 receptor CDNA (pref. pNIV3604B) are used to transform mammalian cells (pref. CHO cells). These transformed cells express the receptor on the cell surface. The transformed cells can then be used to identify ligands that bind to the encoded protein, esp. for drug screening. This sequence is also used to detect complementary mRNA in the cell by hybridisation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 8, Application US/09163444

Sequence 8, Application US/09163444

Sequence 8, Application US/09163444

Patent No. 6251596

Patent No. 6251596

PAPLICANT: Cook, James W.

APPLICANT: Cook, James W.

APPLICANT: Bulawa, Christine

TITLE OF INVENTION: ASPERGILLUS N-MYRISTOYL TRANSFERASE GENES AND POLYPEPTIDES

TITLE OF INVENTION: AND USES THEREOF

FILE REFERENCE: 07334/089001

CURREWY APPLICATION NUMBER: US/09/163,444

CURREWY FILING DATE: 1998-09-30
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ő
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ó

The probe is used to detect benign and/or malignant human papilloma virus. The probe binds to the \rm E6 and/or \rm E7 region of the virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Xylanase; endo-1,4-beta-xylanase; xylan hydrolysis;

                                  The present invention describes a number of phosphorothioate antisense sequences to the human focal adhesion kinase (FAK) protein. This protein is involved in integrin-mediated signal transduction, and is implicated in cancer, particularly colon, breast and oral tumours, embryonic development disorders, anglogenic disorders and wound healing. The antisense sequences, including the one shown here, can be used in the treatment of all of these.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a number of phosphorothioate antisense sequences to the human focal adhesion kinase (FAK) protein. This protein is involved in integrin-mediated signal transduction, and is implicated in cancer, particularly colon, breast and oral tumours, embryonic development disorders, angiogenic disorders and wound healing. The antisense sequences, including the one shown here, can be used in the treatment of all of these.
                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New antisense compounds for inhibiting focal adhesion kinase expression, especially useful for inhibiting retinal neovascularization, or for diagnosing and treating e.g. colon cancer

AAZ53015 to AAZ54536, AAZ54577 to AAZ54615, and AAY74253 to AAX75941 represent novel Neisseria meningitis and N. gonorrheae polynucleotides and polypeptides. AAZ5457 to AAZ54576 and AAZ54616 to AAZ55473 represent PCR primers used in the exemplification of the present invention. The polypeptides, the polynucleotides, antibodies and compositions of the invention can be used as vaccines, as diagnostic reagents, and as immunogenic compositions. The polypeptides can be used in the manufacture of medicaments for treating or preventing infection due to Neisserial bacteria (e.g. meningitis and septicaemia), to detect the presence of Neisseria bacteria, or to raise antibodies. They may also be used to screen for agonists or antagonists, which may themselves may also be used in gene therapy protocols.
                                                                                                                                  Masignani V, Mora M;
Scalato E, Scarselli M;
                                                                                                                                                                                                                                                             Novel Neisserial polypeptides predicted to be useful antigens for vaccines and diagnostics
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates a novel chimeric xylanase (AAY81494) and to DNA encoding it (AAA12985). The chimeric xylanase comprises residues 1-244 of Streptomyces olivaceovitidis xylanase and residues 244-354 of Cellulomonas fini xylanase. Xylanase and residues 244-354 of Cellulomonas fini xylanase. Xylanase and cesidues 244-354 of Cellulomonas fini xylanase. Xylanase also known as endo-1.4-bera-xylan acomponent of the hemicallulose in plant cell walls, into xylo-oligosaccharides and xylose. Xylanase is used in a range of industrial processes. It is used to produce xylo-oligosaccharides from xylan from broad-leafed trees, and is used in wood- pulp bleaching to reduce the amount of chlorine required for this process. Xylo-oligosaccharides can be used as ingredients in foodstuffs and as water-retaining material in cosmetics. The chimeric xylanase of the invention does not generate xylose monomers during the hydrolysis of xylan. It is therefore useful for efficient and reliable xylo-oligosaccharide production. Sequences AAA12990-A1291 represent PCR primers used in an exemplification of the present invention to amplify a primers used in an exemplification of the present invention to amplify a facilian process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0;

The method comprises preparing a reduced complexity genome (RCG) from the genomic sample and analysing the RCG for the presence or absence of a SNP allele. The method can be used to characterise a tumour, to generate a genomic pattern for an individual genome or to generate a genomic classification code for a genome. The method can be used to assess whether a subject is at risk for developing a disease or to identify a set of SNP alleles associated with a disease. The method can also be used to perform linkage analysis. AAA35944 to AAA35947 represent

                                                                                                                                                                                                                                                       Gaps
                                                                                         Factor VIII analogue is sufficiently mutated from the original gene that it is not recognised by blood Abs of the patient. The analogue is composed of human FVIII but carries the B-domain of human FV in place of the FVIII B domain.

Oligonucleotides can be used to alter the profile of the blood factor without significantly altering its activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human genomic SNP allele specific oligonucleotide SEQ ID NO:566.

                                                                                                                                                                                                                                                                                                       8
```

```
The present sequence represents a G-motif oligonucleotide of the invention. The specification describes compositions comprising G-motif oligonucleotides inhibiti activation of aligonucleotides. The G-motif oligonucleotides inhibit activation of artigen presenting cells by inhibiting the uptake of DNA by a cell, by stimulating natural killer cells, or by co-stimulating cytotoxic.

Tripophocytes. The G-motif oligonucleotides may be used for the productions of vaccines for treating septic shock, inflammation, autoimmune diseases (e.g. rheumatoid arthritis, Crohn's disease, sarcoidosis, multiple sclerosis, Kawasaki syndrome, graft-versus-host diseases (e.g. Streptococcal induced arthritis, Lyme arthritis, chronic inflammatory bowel disease, psoriasis vulgaris, experimental allergic encephalomyelitis, and insulin-dependent diabetes mellitus), bacterial infections, parasitic infections (e.g. Leishmaniasis or Toxoplasmosis), viral infections (e.g. Cytomegalovirus and human immunodeficiency virus)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           G-motif oligonucleotide; vaccine; Toxoplasmosis; viral infection; antigen presenting cell activation; natural killer cell; septic shock; cytocoxic T-lymphocyte; inflammation; autoimmune disease; rheumatoid arthritis; Crohn's disease; sarcoidosis; multiple sclerosis; Kawasaki syndrome; graft-versus-host disease; transplant rejection; helper T cell response 1-mediated disease; Lyme arthritis; streptococcal induced arthritis; chronic inflammatory bowel disease; psoriasis vulgaris; experimental allergic encephalomycalitis; insulin-dependent diabetes mellitus; bacterial infection; tumour; ss. parasitic infection; Leishmaniasis; spontaneous abortion; tumour; ss.

This involves the transformation of a plant with a vector encoding a reporter gene linked to an AOX promoter, mutagenesis of the plant to increase expression of the reporter gene and then determining the identity of the signal transduction gene of interest. This is useful in the production of transgenic plants with increased productivity, herbicide, stress and pest
(HIV)-infections), spontaneous abortions and tumours. They may also be used to induce proliferation of bone marrow cells, especially macrophage

comprises: (a) introducing into the system a random library of nucleic acid catalysts (NAC) having a substrate binding domain (SBD), comprises:

acid catalysts (NAC) having a substrate binding domain (SBD), comprising a random sequence, and a catalytic domain (CD); and (b) identifying NAC in systems where modulation has occurred and/or determining the sequence of at least part of the SBDs in such systems. Nucleic acid molecules with endonuclease activity and catalytic activity, from the present invention, are used to modulate gene expression in plant and mammalian cells and to cleave target nucleic acid, particularly for treating systemic diseases caused by specific RNA, e.g. cancer, inflammation, psoriasis, non-hepatic ascites and infection. They may also be used to determine craft and mutations in diseased cells and to determine craft RNA. Specifically NACS with RNA-cleaving activity that modulate expression of the Raf gene, are used to treat cancer, restenosis, with the level of c-raf. Introduction of sugar/phosphate modifications in character that the level of c-raf. Introduction of sugar/phosphate modifications associated mith the level of c-raf. Introduction of sugar/phosphate modifications associated madility against nuclease and activity. Any 90922 to ANY 93877 confinence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               method has been developed for the identification of a nucleic acid
                                                                                                                                                                                                                                                                                                                                                                    Identifying new catalytic nucleic acid that modulates selected processes - especially ribozymes that cleave Raf RNA for treating cancer, restenosis, and also new ribozymes and modified nucleoside
                                                                                                                                                                                           Workman CT;

PCR primers AAV23717-32 were used during the course of the invention. The specification describes Pseudomonas pseudoalcaligenes lipase variants. The variant lipases described in the specification has have better wash performance than the original lipase. It has improved removal of lipid stains, reduced calcium dependence, better compatibility with detergents or their components, increased hydrophobicity, altered substrate specificity and better one-cycle wash efficiency. The variant lipase is used in detergent and cleaning compositions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PCR primer; human; growth hormone; variant; cachexia; erythropoietin; erythrocyte formation; interferon; antiviral; antitumour; interleukin; immunomodulatory agent; colony-stimulating factor; proliferation stimulation; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                automated genotyping. esp. fluorescence based. The primers correspond to the unique DNA sequence surrounding each marker, and PCR is used to detect each polymorphism. When the MMS show considerable polymorphism (ie. a difference in the number of repeats) between individuals, the markers can be particularly informative. The MMS can be ideal for linkage studies. Kits comprise at least 4 groups, of at least 3 sets, each comprising labelled primers for PCR amplification of the DNA. Group II primer pairs are shown in AAQ95841-82. The published size range of the D95180 allele is 220-265 bp, and the degree of heterozygosity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

The present invention concerns novel methods of producing proteins with free cysteine residues. The PCR primers AAA/A770-A74854 were used to amplify sequences encoding the human growth hormone, erythropoietin and IFN-alpha2 proteins, and signal sequences used to control their secretion, and change these sequences in order to alter their efficacy. One example of modifications is the addition of polyethylene glycol moieties. The proteins could then be produced in cell cultures and isolated for use in the treatment of disorders such as those associated with growth hormone, erythropoietin or IFN-alpha2.
                                                                                                                                                                                                                                                              Producing a soluble protein having a free cysteine comprises exposing a host cell expressing the soluble protein to a cysteine blocking agent, useful for producing recombinant human growth factor and erythropoietin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Producing a soluble protein having a free cysteine comprises exposing a host cell expressing the soluble protein to a cysteine blocking agent, useful for producing recombinant human growth factor and erythropoietin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Erythropoietin; growth hormone; IFN-alpha2; free cysteine residue; PCR primer; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence is a PCR primer for the human growth hormone gene. The invention relates to a variant of a member of the growth hormone (GH) superfamily that has a Cys residue: (a) replacing an amino acid (aa) in the loop regions, near the end of the alpha-helices or in front of, or after, the first amphipathic helix; (b) added to the N- or C- terminus; or (c) introduced between two as in the loop region, at the ends of the calpha-helices or in front of, or after, the first amphipathic helix. The variants are used for the same therapeutic purposes as the wild type sequences, e.g. for GH to treat short stature or cachexia; for sequences, e.g. for GH to treat short stature or cachexia; for crythropoietin (EPO) to stimulate erythrocyte formation; for interferons as antiviral, antitumour or immunomodulatory agents; for colony-stimulating factors or interleukins for stimulating proliferation, differentiation and function of particular types of (haematopoietic) colls. Incorporation of Cys at a non-essential position allows site-specific attachment of e.g. poly(ethylene glycol) (PEG) to create a conjugate with increased circulation time in vivo. This reduces the need for frequent injections and the cost of treatment. Modification with PEG also increases solubility and stability of the protein and reduces its
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                           New variants of growth hormone superfamily proteins containing an extra cysteine - useful, e.g. for treatment of short stature or cachexia, to stimulate erythrocyte formation and as immunomodulator
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Erythropoietin; growth hormone; IFN-alpha2; free cysteine residue;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The present invention concerns novel methods of producing proteins with free cysteine residues. The PCR primers AAA7470-A74854 were used to amplify sequences encoding the human growth hormone, errythropoietin and IFN-alpha2 proteins, and signal sequences used to control their secretion, and change these sequences in order to alter their efficacy. One example of modifications is the addition of polyethylene glycol modeties. The proteins could then be produced in cell cultures and isolated for use in the treatment of disorders such as those associated with growth hormone, erythropoietin or IFN-alpha2.
                                                    Example 4; Page 24; 86pp; English.

Sequence 12, Application US/08800353

Patent No. 5874299

GENERAL INFORMATION:
APPLICANT: Lonberg, Nils

APPLICANT: Any Robert M.
TITLE OF INVENTION: Transgenic No. 5874299-Human Animals Capable of TITLE OF INVENTION: Producing Heterologous Antibodies
NUMBER OF SEQUENCES: 77

CORRESPONDENCE ADDRESS:
ADDRESSEE: William M. Smith
STREET: One Market Plaza, Steuart Tower, Suite 2000
CITY: San Francisco
STATE: California
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 6944,

Sequence 5835, Application US/09198452A

GENERAL INFORMATION:

TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragments

TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, preverints of INVENTION: and treatment of infection

FILE REPERENCE: 9710-003-999

CURRENT APPLICATION NUMBER: US/09/198,452A

CURRENT FILING DATE: 1998-11-24

NUMBER OF SEQ ID NOS: 6849
